Protecting People & Property

WORMALD®

What would a major fire do to your facilities operations?

Protecting people and property

Could your facility cope with a fire? How effective are your fire detection and fire protection systems? Would your staff know exactly what to do in an emergency situation?

With mobility impaired residents, fire protection solutions for the aged care/retirement living sector is high priority, requiring both foresight and expert knowledge, meeting your legislative and accreditation requirements.

As one of the largest fire protection providers we can provide dedicated, specialist teams for design and installation, maintenance and technical support, as well as services ranging from engineering advice to fire safety training.

Wormald, is a business of Tyco, whose fire and security businesses are world leaders in fire protection and electronic security products operating in more than 50 countries world-wide. This gives us access to a vast array of products and intellectual resources.

Fire protection equipment

Wormald offers aged care and retirement living facilities one of the largest range of fire products in New Zealand, from basic fire extinguishers to custom designed and installed automatic fire sprinkler systems. This allows us to offer fire protection solutions to cater for your facilities specific aged care/retirement living needs.

Auditing service

Wormald can conduct a full audit on your facility to help ensure its fire systems comply with all local and national regulatory requirements.

Servicing

Fire protection systems require regular servicing to facilitate optimum performance in the event of a fire. Our service teams can regularly test and audit your systems to ensure they comply with the applicable New Zealand standards.

In addition to conducting regular, scheduled equipment and system testing, Wormald Service technicians are on 24-hour standby, ready to undertake emergency repairs to your fire protection systems and products. Our dedicated 24/7 national call centre ensures that an appropriately skilled technician is allocated to your job.

Fire Training

Emergency response training is another of our most important services. The impact of a crisis is substantially reduced when people on the scene have been properly trained.

Our training solutions include NZQA approved and basic fire training with practical hands-on extinguishing of a fire, through to warden and evacuation procedure training. Our expert trainers can give your staff the confidence they need to act appropriately in a fire.

End-to-end fire protection solutions for aged care and retirement living

With mobile units designed to simulate a range of different fire scenarios in a controlled environment, our courses can give your team valuable hands-on experience. In doing so, we help to ensure that staff react in the most appropriate way to minimise the potential effects of fire on people and property.

Fire sprinklers

Wormald offer a wide range of fully automatic fire sprinkler systems – widely regarded as the most effective means of controlling a fire. Fire Sprinkler Systems can automatically detect and control a fire. Wormald designs, installs and commissions reliable, cost-effective fire sprinkler systems by carefully analysing your facility and its contents in terms of occupancy, operation and fire risk.

Emergency warning and evacuation systems

Our VIGILANT® QE90 Emergency Warning and Intercommunication System (EWIS) is designed to facilitate the orderly evacuation of a building in the event of an emergency. The evacuation may be initiated automatically by a fire alarm system or by a building occupant operating an emergency call point. The QE90 allows fire wardens or emergency services personnel to easily control and coordinate rapid building evacuation.

Detection - MX Technology®

Wormald's advanced detection system, MX Technology®, is best suited for aged care and retirement living facilities, incorporating technology from around the world in a range of state-of-the-art fire detection systems.

MX systems boast an array of detection modes in each detector. They can be set to detect smoke, heat or a combination of these – all without changing the detector. A combined carbon monoxide and heat detector is also available which offers the same flexibility. The carbon monoxide technology linked to MX software is adept at early gaseous detection and highly resistant to the many causes of disruptive unwanted alarms, such as dust and other contaminants.

MX Technology can be configured to allow staff to control and monitor the facility from any computer with an internet connection. There is no need to physically visit the building to investigate or de-activate an alarm. This technology also assists in providing staff with details of where the fire is within the facility. A major advantage of the MX series equipment is its adaptability and backward compatibility which enable the upgrading of existing detection panels compatible with MX Technology.

Experts giving you peace of mind

Installation and Projects

Wormald can engineer fire protection solutions to meet your unique needs. Before installing a new fire protection system, Wormald will survey your facility and analyse the facility design and purpose. Once your exact requirements have been determined, our engineers will plan and deliver a fire protection solution; tailor made to your needs. No matter how big or small, complex or straightforward your requirements are, Wormald can assess the fire risk and design an effective and affordable solution for most environments.

Working together to achieve Zero Harm

Wormald has a comprehensive Environmental, Health & Safety Management System, which aims to exceed legislative requirements. Wormald is committed to its Environmental Health and Safety (EHS) policy, promoting and supporting a culture where ZERO HARM is made to our people and the environment through our work activities.

To meet this commitment, Wormald has a dedicated EHS department who work together on a day to day basis ensuring a Zero Harm culture is maintained through observation, communication, reporting, training and education.

Your partner in fire prevention

As a leader in our field, we value our staff and appreciate the contribution of each individual. We are committed to enhancing our collective capability through ongoing accredited staff training, regular internal audits and careful monitoring of the latest equipment and technology.

We believe in teamwork and have dedicated teams to manage each phase of a project; from risk assessment to installation, service and training. We foster communication between our teams to provide clients with a totally integrated service.

With approximately 500 employees throughout New Zealand and more than 120 years of experience, Wormald has the talent and expertise to provide you with the best total fire protection solutions. Most importantly, we can provide you with peace of mind.

Wormald. Protecting People and Property.
